Open Source XML Gateway available – CORISECIO starts Public Beta-Test

CORISECIO, leading manufacturer of Open Source Security solutions, presents the new CORISECIO Open XML Gateway at the it-sa 2011, hall 12, booth 374.

Darmstadt, October 6th, 2011 – By now, Web Services and Cloud-Computing are inherent components of many companies' IT infrastructure. It's become taken for granted to exchange and use data and services by internal and external networks. XML-based communication (like e.g. web services) is increasingly exposed to threats. These weak points need to be protected efficiently.

CORISECIO presents their Open XML Gateway solution at the it-sa 2011 in Nuremberg from October 11th to October 13th, 2011. The CORISECIO Open Source XML Gateway enables companies to easily protect business critical applications and services. Even prior to release interested parties may participate in the CORISECIO Open Source Security solution's Public Beta. The free XML Gateway solution may be tested extensively. The download is provided at <http://secur.corisecio.com>.

CORISECIO Open XML Gateway provides e.g. methods for protection against SQL Injection and XXE attacks and enables realization of scheme validation as well as WS-Security standards.

The Release Candidate RC1 is ready to use as VM Image „Out-of-the-Box“ in just a few steps. An easy and user-friendly installation and administration of the solution ensure a quick and uncomplicated roll-out and thus the protection of web services in no time at all. Preconfigured Best Practice Security Level provide XML security configuration by just a few mouse clicks. In the expert mode also most complex security requirements may be configured easily.

The flexible architecture grants that Open XML Gateway may easily be combined with other CORISECIO solutions like e.g. SSO. CORISECIO Open XML Gateway may be used as software but also as virtual appliance or as Amazon AMI. Thus companies may easily and efficiently integrate the Open XML Gateway into their infrastructure.

Further CORISECIO highlights at this year's it-sa will be Security for Cloud Computing and Mobile Security. Visit us from October 11th to October 13th, 2011 in hall 12, booth 374 and allow yourself to be convinced by our solutions' potential.
