

## **WORKSHARE AND CORISECIO BRING DATA LEAK PREVENTION DIRECTLY TO THE USER INTERFACE OF SAP APPLICATIONS**

*Solution integrated with SAP applications analyzes and protects data and documents at the content level, accessed through portals and the user interface of SAP Applications*

**Waldorf/Darmstadt, Germany – October 1, 2008** – Workshare, a global leader in content protection and control, and Corisecio today announced one of the industry's first data leak prevention solutions for use with SAP® applications. Through integrated Workshare functionality, the solution allows organizations to effectively protect confidential data and documents directly within the infrastructure and the processes of SAP applications. Companies can automatically secure all applications and portals as well as office and mobile applications, helping to prevent confidential information from being spread unintentionally or inappropriately. The application integrates with SAP-based portals and Web services built with the SAP NetWeaver® technology platform.

The solution runs in the CORISECIO securityRunTime software, which is based on SAP NetWeaver. Content is analyzed if it is accessed through a portal or directly through the GUI. When an SAP-based portal is used, the HTTP traffic is filtered in the data stream before it is shared remotely. If the information is accessed via the user interface of the SAP applications, the Workshare solution automatically scans applications and documents, which are presented through the user interface.

Depending on the enterprise security policy, the solution initiates the appropriate action, ranging from user notification of potential danger to automatically blocking information. Each organization is able to define and dynamically change its security policy and how documents are accessed through SAP applications. Since the solution is integrated with SAP processes, content may be classified at the same time in which it is scanned by the Workshare solution. This helps protect the content so it is generated based on each document's contents rather than leveraging only typical user action.

“Sensitive information falling into the wrong hands remains a significant problem,” said Dr. Bruno Quint, managing director of Corisecio. “The integration of the Workshare solution with SAP applications offers the required level of security in an enterprise-critical environment, based upon content analyzes, which can dynamically re-design business processes.”

“It is not so crucial to know who shares or copies sensitive data and documents, but rather to know how that data is being handled,” said Frank Böning, vice president sales EMEA for Workshare. “Effective data leak prevention is not just a lock but provides a comprehensive solution that knows which data is leaving and entering an organization. The integration of Workshare Protect with SAP applications helps monitor which data are welcome and which are not.”

Workshare and Corisecio will demonstrate the Workshare Protect data leak prevention solution together at SAP TechEd 2008 Berlin, October 14-16 at booth number 2.30.

### **About Corisecio**

The CORISECIO GmbH is leading manufacturer of security products for Service Oriented Architectures. SOA-based applications and portals are easily and efficiently protected using standard solutions. Basis is the internal securityRunTime, which automates the complete SOA lifecycle. Security processes are managed, deployed and modeled centrally. The consequent use of open standards enables a system- and platform-independent implementation. With this technology, portals and web applications may be protected using existing AntiVirus, Web Application Firewall and DLP solutions. CORISECIO has achieved “SAP Certified – Powered by SAP NetWeaver” status for a number of its solutions. Its solutions, in support of SAP applications, protect portals and SOA infrastructures of other manufacturers efficiently and reliably. The product portfolio is rounded off with enterprise solutions for security and management of mobile devices as well as for encryption of databases and documents.

The CORISECIO GmbH headquarters are in Darmstadt and is supported by distribution partners worldwide. Many renowned DAX-30 companies are amongst the customers and partners of the CORISECIO GmbH. [www.corisecio.com](http://www.corisecio.com)

### **About Workshare**

Workshare, the global leader in secure content compliance, delivers content protection and control solutions to over 12,000 organizations worldwide. Workshare solutions combine policy enforcement, management control and user entitlement to ensure safe information exchange without business disruption. Its products include the Workshare Protect Suite, Workshare Professional Suite, and TRACE! In addition, the company’s WorkshareOpen™ platform enables third-party applications to easily add content-risk functionality. Workshare’s customers, representing more than 1.2 million users in 65 countries, span small to large organizations in every industry, and include 70% of the Fortune 500, 85% of the Global ProServices 250 and 99% of the AmLaw 200. Workshare is Microsoft’s current global ISV/Solution Partner of the Year, has appeared at DEMO and won numerous industry awards. The company has offices in San Francisco, New York, Chicago, Atlanta, Dallas, Washington DC, London, Frankfurt, Hong Kong, Paris and Sydney. Workshare is the sponsor of [www.metadatarisk.org](http://www.metadatarisk.org), the definitive source for content security.
